

send-string-secure

Requirements:

- **SecureString.txt** ([see resources](#))
- **AutoHotkey** Installed ([see resources](#))
- **send-string-secure.ahk** in a "Running" state ([see .ahk](#))

Slightly more complex script to pull a desired number of characters from a txt file starting at a specified character position. This is a great way to mask a secure password (one that uses a long string of unreadable characters, numbers and symbols) - using the set hotkey at the beginning of the script
