send-string-secure

Requirements:
- **AutoHotkey** Installed *(see resources)*
- **send-string-secure.ahk** in a "Running" state *(see .ahk)*
- **SecureString.txt** *(see resources)*

Slightly more complex script to pull a desired number of characters from a txt file starting at a specified character position. This is a great way to mask a secure password (one that uses a long string of unreadable characters, numbers and symbols) - using the set hotkey at the beginning of the script
